Announcement of a Director Position at MPIbpc

The Max Planck Institute for Biophysical Chemistry has an opening at the director level.

The Institute is primarily focused on the quantitative analysis of biological processes using biochemical, genetic, cell biological, biophysical, and computational methods (http://www.mpibpc.mpg.de). For this particular position we envisage a distinguished individual whose research focus is in the area of transcriptional regulation. In particular, his/her research is expected to investigate the molecular mechanisms of gene transcription in eukaryotic systems using structure biology and molecular systems biology.

The Max Planck Society is aiming at increasing the percentage of women among its scientific leadership, particularly at the director level and therefore strongly encourages expressions of interest from and nominations of qualified women.

Please send letters of interest or nominations of candidates to the managing director Gregor Eichele at your earliest convenience. All enquiries will be treated confidentially.

Max Planck Institute for Biophysical Chemistry
Gregor Eichele
Fassberg 11
D-37077 Göttingen
