A Scientist at the other SIDE of publishing

The publication process has become an integral part of scientific research and scientists are involved in all aspects of it, not only as authors and referees but also at the publisher's side.

However, the role and responsibilities of the journal editor, and the fact that it can be an attractive career for young researchers, are often little known.

I have moved from a postdoc position at a Max-Planck Institute to an editor job at Wiley-VCH and have not regretted my decision. I'll discuss the motivations that made me jump "at the other side" of publishing and what I have learned (so far) about the job.
